DETAILED ACTION

1. Claim 4 is presented for examination.

Election/Restrictions

1. Applicant's election of claim 4 in Paper No. 13 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

2. This application contains claims 1 – 3 and 5 – 12 drawn to an invention nonelected with traverse in Paper No. 13. A complete reply to the final rejection must include cancelation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an

Art Unit: 2143

international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claim 4 is rejected under 35 U.S.C. 102(e) as being anticipated by Glitho et al. U.S. Patent No. 6233449 (hereinafter Glitho).

5. As per claim 4, Glitho teaches a method of monitoring a state of a service, the service being composed of components of a network, and the service affecting operation of a business process, the method comprising:

6. monitoring the network components to determine the state of the service, and when the state of the service is degraded, determining a cause of the degraded service by performing one or more of:

7. testing the components,

8. querying a database,

9. modifying the components, and

10. implementing a reasoning algorithm, (e.g. col. 4, line 55 – col. 5, line 40, “*degradation, modifies its suggested corrective actions*” & col. 5, line 63 – col. 6, line 19 & col. 6, line 45 – col. 7, line 20, “*testing, Fault Analysis*”).

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
12. a. Douik et al. U.S. Patent No. 6012152 discloses Software fault management system.
13. b. Lee et al. U.S. Patent No. 5446730 discloses Method for dynamic connection management in integrated communication networks.
14. c. Galand et al. U.S. Patent No. 6424624 discloses Method and system for implementing congestion detection and flow control in high speed digital network.
